EDUCATION

University of Santo Tomas

Bachelor of Science in Information Technology, Network and Security Track

Manila, Philippines

Aug 2022 – May 2026

Capstone: Network Server Implementation, Pinnacle Review School (Project Manager / Network Engineer)

- Designed a segmented, failover-ready network for 500+ users using VLANs, ACLs, and role-based segmentation, upgrading firewall routers, managed PoE switches, and access points to reach 99% uptime and 90%+ wireless coverage.
- Deployed and administered a Kali Linux server running FreeRADIUS, DHCP, and Samba for centralized authentication, network access control, IP address allocation, and secure file sharing.

EXPERIENCE

Delivery Intern

Feb 2026 – Jun 2026

Noventiq Services International Philippines Inc.

Philippines

- Developed PowerShell scripts to automate bulk Microsoft 365 provisioning, UPN-to-alias migration, and SMTP address updates for 300+ users and 1,000+ records in a hybrid Microsoft Entra ID environment.
- Supported testing and troubleshooting of Microsoft 365, Entra ID, Intune, Defender, BitLocker, Data Loss Prevention (DLP), and SAML single sign-on (SSO) in enterprise lab environments.

PROJECTS

DevSecOps CI/CD Pipeline Lab | Jenkins, Docker, Kubernetes, Trivy, SonarQube, Prometheus, Grafana

- Built a 15-stage Jenkins pipeline that tests (Jest), security-scans (Trivy, SonarQube, Gitleaks), containerizes (Docker), and deploys a Node.js app to Kubernetes with smoke tests and rollback-safe rolling updates.
- Integrated Prometheus metrics, Grafana dashboards, and a live web portal showing scan results, quality gates, and build history after every run, with monitoring health enforced as a build gate.
- Led architecture and code review with AI pair-programming (Claude Code); authored ADRs, runbooks, and a security model so the lab serves as a reference blueprint for production CI/CD.

joaqs.online – Portfolio Website on AWS | Terraform, AWS, Cloudflare, GitHub Actions

github.com/luiszaragh/joaqs.online

- Architected and provisioned 51 AWS and Cloudflare resources across 5 reusable Terraform modules (S3, CloudFront with Origin Access Control, ACM, Lambda, DynamoDB, Cloudflare DNS), with encrypted S3 remote state and state locking. Operated the production stack for under \$1/month on pay-per-request serverless infrastructure.
- Eliminated long-lived cloud credentials by federating GitHub Actions to AWS IAM through OIDC, with trust policies scoped to a single repository and branch. Enforced Gitleaks secret scanning across full Git history and Checkov/TFLint policy checks as blocking gates on every infrastructure change.
- Engineered a GitHub Actions CI/CD pipeline that builds, deploys to S3, invalidates the CloudFront cache, and runs a post-deploy health check, releasing every commit to production in about 30 seconds. Codified a \$10/month AWS Budgets alarm with SNS alerting to cap spend.
- Developed a serverless AI chatbot on AWS Lambda and Amazon Bedrock with a DynamoDB response cache keyed on a SHA-256 content fingerprint. The cache serves 51% of queries at 0.2 s median latency instead of 1.3 s (6.5× faster) and cuts p95 latency from 2.7 s to 0.24 s.

CERTIFICATIONS

AWS Certified DevOps Engineer – Professional (DOP-C02)

AWS Certified Solutions Architect – Associate (SAA-C03)

AWS Certified CloudOps Engineer – Associate (SOA-C03)

TECHNICAL SKILLS

Cloud (AWS): EC2, IAM, S3, VPC, CloudFront, Lambda, DynamoDB, Bedrock, CloudWatch, CloudFormation, CodeDeploy

DevOps & Infrastructure as Code: Terraform, Docker, Kubernetes, Jenkins, GitHub Actions, Git, GitHub, Claude Code

Security & Monitoring: Trivy, SonarQube, Gitleaks, Checkov, TFLint, Prometheus, Grafana

Microsoft 365: Entra ID, Intune, Purview, Defender, Outlook, SharePoint

Programming & Scripting: Python, Bash, PowerShell, JavaScript, Java, PHP, HTML, CSS

Networking & OS: Cisco, AWS Networking, Windows Server, TP-Link, Cisco Packet Tracer, Linux, Windows, macOS
